SYNTHETIC TRAINING DOCUMENT

Patient Name	Sophia Ava Kumar	Medical Record No.	886825
Date of Birth	25/10/1962 (Age 63)	Medicare No.	4203 09890 7
Address	151 Olympic Lane, Cronulla NSW 2230	Referring Clinician	Dr A. Walker
Examination Date	29/08/2026	Facility	Central Mountains Hospital Physiotherapy Department
Reference No.	PHY-2026-77550		

PRESENTING COMPLAINT AND HISTORY

Mrs Kumar attends for physiotherapy assessment of bilateral knee pain (right worse than left) of 3 years duration, progressively limiting walking distance to 200m before requiring rest. Pain rated 6/10 at worst, 3/10 at rest. Stiffness in the morning lasting <30 minutes.

RELEVANT BACKGROUND

Pain worst on stairs, prolonged standing, and at the end of the day. No locking or true giving way.

OBSERVATION AND POSTURE

Antalgic gait favouring left. Bilateral knee crepitus. Right knee flexion 110°, extension 0°; mild effusion. Left knee flexion 125°. Mild varus alignment bilaterally. Quadriceps strength 4/5 bilaterally. No ligamentous instability.

RANGE OF MOTION AND OBJECTIVE FINDINGS

Joint / Movement	Right	Left	Normal
Knee Flexion	114°	120°	135°
Knee Extension	2° (mild lag)	0°	0°
Hip Flexion	120°	114°	120°
Pain Score (NRS, current)	5/10		
Pain Score (NRS, worst)	6/10		
Functional Walking Distance	50m		
Mobility Aid	2-point frame		
Falls (last 12 months)	2		

PROBLEM LIST

- Bilateral knee osteoarthritis (right > left) with reduced ROM
- Quadriceps weakness bilaterally
- Reduced functional walking distance (200m)
- Antalgic gait pattern
- Obesity (BMI 32) contributing to mechanical load

CLINICAL IMPRESSION

Bilateral knee osteoarthritis (right > left)

PLAN

Orthopaedic referral if progressive functional decline despite conservative management.

GP review regarding weight management.

Hydrotherapy referral.

Physiotherapy review fortnightly for 8 weeks.
