Address:	150 Vale Cres, Wollongong NSW 2500	Phone:	0443 174 231

Dear Dr O'Brien,

Thank you for seeing Chloe, a 58-year-old café owner, whom I am referring for urgent colorectal surgical assessment of newly diagnosed colon cancer.

Presenting complaint

Sigmoid mass identified on staging CT after presentation with PR bleeding and altered bowel habit. Colonoscopy documented an ulcerated mass; biopsies documented adenocarcinoma.

Relevant history

No prior colonoscopy. Family history significant for colorectal cancer in father aged 64.

Last colonoscopy 8 years ago, normal. Family history negative for malignancy.

Examination

Mild tenderness in the right iliac fossa. No palpable mass. PR examination unremarkable.

Investigations to date

Bloods (13/04/2026): Hb 98 g/L (L), MCV 76 fL (L), Ferritin 8 ug/L (L), Iron 4 umol/L (L), CEA 14.2 ug/L (H), Albumin 32 g/L (L).

Imaging: CT abdomen/pelvis: 68mm ascending colon mass with circumferential wall thickening. Two enlarged pericolic lymph nodes (12mm and 9mm). No liver lesions. No distant metastases. CT chest: no pulmonary metastases.

Summary and request

In summary, Chloe has a confirmed diagnosis of colorectal adenocarcinoma on colonoscopy biopsy with staging CT showing locally advanced disease warranting specialist assessment and further investigation.

I would be grateful if you could assess and consider:

- Urgent specialist colorectal surgical review for definitive surgical management
- Multidisciplinary team discussion to plan appropriate adjuvant therapy following surgery
- Genetic counselling referral given the patient's age and family history if appropriate
