PRESENTING COMPLAINT

Mrs Stewart attends cardiology clinic for review of newly diagnosed dilated cardiomyopathy following workup for worsening exertional dyspnoea. TTE confirmed LVEF 28%, dilated LV. Coronary angiogram normal.

OBSERVATIONS ON ARRIVAL

HR 79 | BP 120/71 | RR 14 | SpO2 97% RA | T 37.1°C | GCS 15

EXAMINATION

Slight dyspnoea on examination. HR 88, BP 108/72. Soft S3. Mild bibasal crackles. Mild peripheral oedema.

INVESTIGATIONS

Bloods: BNP 1,240 pg/mL (H), Creatinine 98 umol/L, K 4.4 mmol/L.

Imaging: TTE: LVEF 28%, severely dilated LV (LVEDD 64mm), global hypokinesis, mild MR. Cardiac MRI: no late gadolinium enhancement (excluding myocardial scar/myocarditis).

WORKING DIAGNOSIS

Dilated cardiomyopathy (idiopathic), with HFrEF (ICD-10-AM: I42.0)

Background: Recently diagnosed HFrEF (LVEF 28%)

ED MANAGEMENT

Standard ED workup completed. Bloods, ECG, and indicated imaging performed.

DISPOSITION & PLAN

Admitted to General Medicine for ongoing management. Inpatient team handover completed at the bedside. Family informed and contact details confirmed. Patient settled on the ward at the time of this documentation.

CLINICIAN

Dr Olivia Anderson, PGY3 Registrar, Emergency Medicine

Provider No.: TRN-PROV-62269

Documented: 14/04/2026 03:03
